

RHINO® HONEYCOMB VESSEL RINSERS

EFFECTIVE MECHANICAL CLEANING - The Spinjet Valve sprays and spins at the same time creating a more robust mechanical cleaning action than regular rinsing valves. It is ideal for plungers using tea leaves, stubborn coffee grounds, and milk and other residues that can often be difficult to clean.

SUPERIOR DRAINAGE - The honeycomb grate design on the RHPR300-S minimises the surface area of the drain tray, reducing static build-up of liquids and making cleaning easy. The low profile body is optimally sloped and angled to ensure effective removal of liquids, reducing common odours caused from static waste. A large drain outlet and wide grate-free opening near the drain creates a convenient location to quickly discard larger volumes of liquid.

LARGER VESSEL OPTIONS - The Actuator Star diameter allows both small and larger vessels to be cleaned easily. An ideal add-on for blender jugs and other larger vessels is the Blender Adapter Kit. This kit includes an extension rod and a larger actuator to suit plungers, milkshake cups, and popular blender jugs such as Blendtec and Vitamix.
