

DELTER COFFEE P R E S S

Delter Coffee Press

Delter Coffee Press has been designed to solve one of the biggest problems in coffee brewing - agitation. To avoid a bitter and inconsistent extraction caused by uncontrolled agitation, the Delter Coffee Press uses a unique jet-seal. This seal keeps the brew water and the coffee grounds separated until the brew commences, preventing uncontrolled agitation. When pressure is applied to the plunger, water and coffee contact is activated, allowing agitation to occur for the first time. This design allows the user to have complete control over the water flow and agitation, resulting in a brew with less bitterness and more clarity.

Delter Coffee Press

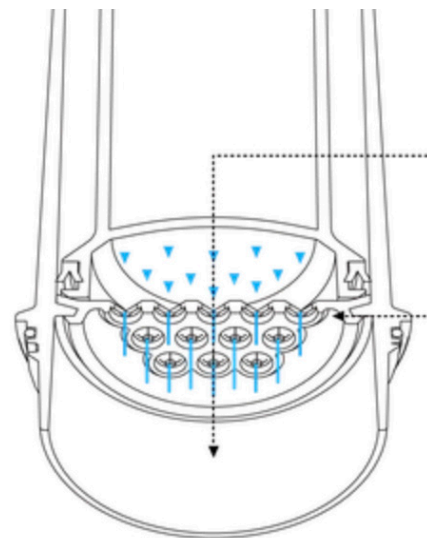

SKU: DELTER

The JET-SEAL - A game changer.

Delter Coffee Press is the first ever coffee maker designed from the ground up, to solve one of the biggest brewing problems - agitation. Uncontrolled agitation results in bitter coffee and inconsistent extraction.

1. The unique Jet-Seal of the Delter keeps the brew water and coffee grounds separated preventing uncontrolled agitation.
2. Water contact is activated by actuating the Jet-Seal with pressure, offering complete control over water flow and agitation.
3. The result is an exceptional cup like no other. Less bitterness with more clarity.

Specifications & Inclusions:
